PROTOCOL FOR ENTRY INTO STRATHMORE UNIVERSITY.

1. All persons entering the University will be screened at a Screening tent which will be situated at all designated entry points.
2. The staff at the screening points will be medical staff – preferably nurses who will be there at the times required. e.g. if we have 4 entry points then we will need 4 screening points and therefore 4 nurses.
3. All persons accessing SU will be required to have a mask which they must wear appropriately at all times on the premises.
4. Each screening point will require the following:
   – Tent
   – Table
   – chair
   – Appropriate PPEs (Gown, N95 mask, cape, eye protection, shoe covers, gloves)
   – A supply of 3-ply medical masks for sale to those who do not have masks
   – Book for data collection and stationery.
5. The information that will be captured will be as follows
   a. Name
   b. Age
   c. Gender
   d. Residence
   e. Telephone number
   f. Destination within Strathmore
   g. Purpose of visit
   h. Case definition data
      i. Temperature Check – to rule out fever (>37.5 degrees)
      ii. Respiratory tract symptoms – sore throat, cough, breathlessness or chest pain or any flu – like symptoms.
      iii. Other symptoms – body ache, fatigue, headache, loss of taste and smell.
      iv. History of travel
      v. Exposure to persons or places with known COVID 19 positive persons or suspected cases.
6. Any person who from the screening meets the case definition above WILL NOT BE ALLOWED to access the premises. (that is, answers in the affirmative to any of the case definition criteria).
7. The person who meets case definition will be asked to sit aside in an open well ventilated area and the Medical Centre should be alerted.
8. Any person who meets the case definition will be referred to the Medical Centre who will then alert the MOH – Disease Surveillance Unit Langata for COVID 19 and the person will either:
   a. Be asked to go for testing to the MOH designated testing sites
   b. Self-quarantine for 14 days or until the results are released.
   c. If the results are negative the person is safe to come out of quarantine
   d. If the results are positive, the person will be referred to the MOH isolation or treatment centres or treatment centres of their choice.
